EDUCATION

BITS Pilani
B.S. Computer Science
CGPA 8.21 / 10 · 2024–2028

WHAT I BUILD WITH

LANGUAGES
Python, TypeScript, Swift, Kotlin

FRONTEND & APPS
React, Next.js, Vite, Tailwind; SwiftUI & AppKit (macOS); Jetpack Compose (Android)

BACKEND & DATA
Node, Deno, Supabase / Postgres, SQLite, Stripe

AI & ML
Anthropic, OpenAI, Groq, Gemini, xAI APIs; RAG; AI agents; real-time voice (LiveKit, Deepgram, Cartesia); reinforcement learning (GRPO, PPO, LoRA, Stable-Baselines3, TRL)

INFRA & TOOLING
Vercel, Railway, Hugging Face, mitmproxy, Git

RECOGNITION

Meta x PyTorch Hackathon — Top 100 of 35,000+ teams

iQOO Hackathon, Bengaluru — Special Honour + prize money for Drishti

Self-taught. I build my own tools so I never depend on anyone, and I finish what I start.

I taught myself to build. I collaborate on everything I ship, and I also build my own custom tools, tuned to exactly how I work, so I never have to depend on anyone else. I take products from start to finish, and I finish what I start.

EXPERIENCE

Social Gravity AI, Inc. — Founding Engineer

Remote · Nov 2025 / Mar 2026 – Present

An app where you can call an AI version of a real person and talk to it out loud, like ringing up their digital twin. [open ↗](#)

- Came on in November 2025 and spent the first months learning everything, then started contributing as a founding engineer in March 2026.
- I collaborated on everything with a teammate who turned down a Google DeepMind research internship, from product decisions to what we shipped.
- I owned the web embedding end to end, the piece that lets the AI twin live and talk on any website, along with the overall user experience.
- Together we cut the AI's reply time from **3 to 5 seconds** down to **under 1 second**, so talking to it feels like someone already there.
- In the first two weeks the product had **2,500** conversations and **73,000** minutes of talk, with **93** creators asking to join.

Findable — Co-Founder, Engineering

Remote · Apr 2026 – Jun 2026

Helping businesses get found by AI assistants like ChatGPT, not just Google. [open ↗](#)

- I owned the technical SEO and the GEO (getting found by AI) roadmap and strategy that drove the results, while my partner in Switzerland brought in the clients.
- Took a German shop earning **€30 to €50k** a month that was almost invisible to AI, found exactly why (**49** fixes), and built the plan and changes behind the turnaround.

UpSale — Head of Growth & Post-Production

Remote · Sep 2024 – Mar 2025

A European social media agency.

- Started as a video editor, then grew into strategy and the overall creative direction, working closely with the team.
- Made restaurants go viral and grew them by **5,000 to 10,000** followers, owning both the post-production and the growth.

THINGS I'VE BUILT

Mac apps [Swift](#)

Native Mac menu-bar apps I built from scratch for my own daily use: a live meter that shows my Claude AI usage in real time, and a fast, tiny world clock. Custom tools, tuned to how I work, so I rely on no one else's.

Steward [live](#) [open ↗](#)

A tool I built for myself that reads all my email and WhatsApp, quietly clears the junk, and only pings me for what truly matters, with one tap to approve. On my real account, out of about **4,900** messages it sorted, only **95** were ever sent, each one after I said yes.

The Referee [Meta x PyTorch · Top 100 / 35,000](#) [live demo ↗](#)

When two AIs write code at the same time, they can quietly disagree and break things later. With my team, we trained a small AI to catch it early, going from guessing (about **1 in 3**) to right **almost 9 in 10** times.

Hospital helper [Meta x PyTorch · Top 100 / 35,000](#) [live demo ↗](#)

With my team, I taught an AI to decide which patients get the few free beds and ventilators first. It made smarter calls than the hand-written rules and kept about **8 in 10** patients alive in the simulation.

Drishti [iQOO · Special Honour](#)

With my team, we built an app that tells blind people which Indian rupee note they are holding, out loud, with no internet. It is right about **9 in 10** times, speaks Hindi, English and Kannada, and says so when unsure instead of guessing. Built in a 30-hour sprint; won a Special Honour and prize money.

More

An Instagram content engine that posts on its own and learns what works. Plus Nuska (in progress), a voice-to-prescription tool for doctors.
